RAVENDRA PATEL

Aspiring Full Stack Developer | AI & Data Enthusiast
Bangalore, India | +91 78285 50697 | patelsamerth9@gmail.com
linkedin.com/in/ravendra-patel-3bb375338 | github.com/RavendraPatel09

PROFILE AND OBJECTIVES

Computer Science (Data Science) undergraduate with hands-on project experience in Python, C++, and web-based application development. Strong foundation in Database Management Systems, with growing exposure to AI/ML fundamentals, LLM-based agentic tools, and data-driven applications. Built multiple independent projects, including a Smart City backend platform, an AI-powered travel planner, and a vibe-coded portfolio. Actively expanding into AI/Data engineering and full stack development. 4x Software Hackathon Finalist, including a NASA Space Apps Challenge 2025 Regional Winner & Global Nominee. Seeking an entry-level Full Stack Developer / AI & Data Intern role to apply strong problem-solving skills to real-world engineering challenges.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering (Data Science) *Expected 2028*
Oriental Institute of Science and Technology, Bhopal
CGPA: 7.5 / 10

TECHNICAL SKILLS

Languages: Python, C++, JavaScript

Data & AI Foundations: Probability & Statistics, AI/ML fundamentals (supervised & unsupervised learning), Generative AI, Agentic AI, Prompt Engineering

Frontend: React, Tailwind CSS, Framer Motion, HTML5, CSS3

Backend: FastAPI, REST APIs, WebSockets

Databases: MySQL, PostgreSQL, SQLite

AI-Assisted & Agentic Dev Tools: Claude Code, GitHub Copilot / Codex, Google Antigravity, vibe coding workflows for rapid prototyping

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, macOS

Currently Learning: NumPy, Pandas, Machine Learning, TensorFlow, PyTorch, LangChain, RAG, System Design, Cloud Architecture

PROJECTS

Tripmate | *React, AI Integration* GitHub

- Built an all-in-one travel planner that takes a user's preferences — budget, interests, and travel style — and generates a personalized trip itinerary with destinations, food guides, packing lists, and emergency info.
- Used AI (Gemini) along with Wikipedia and Maps data to gather real-world insights and recommendations, powering smarter and more relevant trip planning.

AI Resume Analyzer | *Python, AI* GitHub

- Built an AI-powered resume analyzer that reviews resumes against job descriptions, scoring keyword match and formatting to give actionable, real-time improvement suggestions.
- Applied LLM-based analysis to automate feedback that would otherwise take a human reviewer, speeding up the resume refinement process for job seekers.

Smart Bhopal Backend | *Python* GitHub

- Built a Smart City backend platform for Bhopal covering real-time traffic monitoring, utilities management, citizen services, and analytics.
- Designed modular backend components to handle multiple civic data streams, creating a scalable foundation for municipal IoT telemetry.

ACHIEVEMENTS

- **4x Software Hackathon Finalist** – national and university levels
- **NASA Space Apps Challenge 2025** – Regional Winner & Global Nominee
- **National Level Ideathon** – Runner-Up
- **Participated in 25+ Hackathons & Tech Events** – national and university levels
